DETAILED ACTION

Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claim 14 is rejected under 35 U.S.C. 102(b) as being anticipated by Okada (US Pat. 5,959,854).

Regarding claim 14, figure 5 of Okada shows a multi-function driver configurable to process either single-ended or differential signals, comprising:

first and second circuits (pull-up and pull-down transistors included in inverter INV4) connected in series between a supply voltage and ground potential, the first and second circuits each having an input to receive a first input signal ($\phi 2$) and having a first common output to provide a first output signal;

third and fourth circuits (pull-up and pull-down transistors included in inverter INV1) connected in series between the supply voltage and ground potential, the third and fourth circuits each having an input to receive a second input signal ($\phi 3$) and having a second common output to provide second output signal;

a first switch (TG2) to selectively connect the first and third circuits together in response to a mode signal ($\phi 1$); and

a second switch (TG3) to selectively connect the second and fourth circuits together in response to the mode signal ($\phi 1$). Note that an inverter comprises two transistors connected in series (see reference 6,724,231, element 36 of figure 1C).

Allowable Subject Matter

Claims 15-24 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.

Art Unit: 2816

Claims 1-13 and 25-31 are allowed.
